

Problem-Solution Fit Canvas

Project: Plugging into the Future: An Exploration of Electricity Consumption Patterns

1. Customer Segment(s): Households, apartment residents, industries, energy researchers and electricity boards.	6. Customer Constraints: Lack of awareness, scattered data, limited technical skills and budget.	5. Available Solutions: Electricity bills, spreadsheets, smart meter apps and manual calculations.
2. Jobs-to-be-Done / Problems: Track electricity usage, identify high consumption, compare trends and reduce energy costs.	9. Problem Root Cause: Consumption data is difficult to analyze and users lack meaningful insights.	7. Behaviour: Users check monthly bills, record readings manually and search online for energy-saving tips.
3. Triggers: High electricity bills, seasonal usage spikes, government energy-saving campaigns.	10. Your Solution: A web application that uploads electricity datasets, analyzes trends, visualizes usage with charts and generates reports.	8. Channels of Behaviour: Online: Web portals, mobile apps, utility websites. Offline: Electricity offices, printed bills, awareness programs.

4. Emotions (Before/After): Before - Confused, uncertain about high bills. After - Informed, confident and able to reduce consumption.
